

OUR NEW OFFICE IN MILAN

It was early 2023 when the search for a new space to house our offices began. Fully reflecting our corporate values, with a focus on both people and the sustainable impact of our choices, were, from the very beginning, the pivotal criteria that guided our path.

A challenge that was very ambitious right from the very early stages with the choice of the building that could accommodate us. Even in a place like Milan, in fact, it was not easy to find a space that could ensure high quality standards, supported by certifications that would guarantee minimum requirements in terms of sustainability, environmental impact and use of resources.

We are therefore very proud to say that we have found in this building, located in the historic center of Milan, a LEED and WELL certified office, both at gold level.

The same relationship established with the property's owner then, represents a further level of enhancement of our approach devoted to individual well-being and the environmental relevance of our choices: we have in fact adhered to a Green Lease protocol, which obliges us to communicate our consumption of electricity and water, on a monthly basis as well, so as to make it possible to constantly monitor the use of the office in terms of energy savings and efficiency.

OUR NEW OFFICE IN MILAN

The custom and ecofriendly design of the spaces was then the next step in our journey. The great opportunity was to have a completely new space in front of us, a blank canvas in which we could design from scratch a pleasant place people could use and share with pleasure, fostering cooperation and dialogue, through a flexible layout, easily adaptable to different needs. All of this was done with the utmost respect for the environment, seeking design solutions and sustainable materials.

In the following pages, we will take you through a narrative of our major choices, hoping to inspire you to do the same, in the belief that the pursuit of sustainability at all costs is possible and can be implemented without sacrificing the well-being of employees.
